

**INCIDENT MANAGEMENT SITUATION REPORT
 MONDAY, JUNE 13, 2005 – 0530 MDT
 NATIONAL PREPAREDNESS LEVEL 1**

CURRENT SITUATION:

Initial attack activity was light nationally with 83 new fires reported. Two new large fires were reported the Southwest Area. Very high to extreme fire indices were reported in Alaska, Arizona, New Mexico, Colorado, and Kansas.

SOUTHWEST AREA INCIDENTS / LARGE FIRES:

HULET, Bureau of Indian Affairs. This fire started on Bureau of Indian Affairs land 10 miles south of Bullhead City, AZ in grass. A Type 2 Incident Management Team (Philbin) is assigned. Smoldering and occasional torching was observed.

NOV2, Grand Canyon National Park. This lightning-caused Wildland Fire Use (WFU) incident is being managed to accomplish resource objectives. The fire started on National Park Service land 45 miles southeast of Littlefield, AZ in pinyon, juniper and brush. The fire made a significant run in the late afternoon.

OUTLOOK:

Weather Discussion: Throughout the western United States today, high pressure will be building. This will lead to warming and drying from the Southwest northward through much of the Great Basin. In Alaska, gusty east winds should relax in eastern Alaska, but humidity values will remain low.

Geographic Area Weather	High Temperatures	Minimum Relative Humidity	Wind
Western Great Basin Mostly sunny.	North Valleys: 73 to 88 South Valleys: 84 to 100 Mountains: 65 to 80	North Valleys: 10 to 30% South Valleys: 7 to 17% Mountains: 15 to 35%	Upslope <10 mph.
Northern California Clear, except patchy morning low clouds and fog from the coastal mountains to the coast.	90s warmest inland valleys. 70s and 80s inland. 60s coast.	12 to 25% driest inland valleys. 17 to 32% inland 40 to 60% coast.	NW to NE 5 to 15 mph with local gusts to 25 mph, decreasing in the afternoon.
Alaska Interior: Partly cloudy with isolated showers and thunderstorms.	Upper 60s and 70s.	17 to 35%.	North to northeast up to 15 mph.
Southern California Morning low clouds and fog coastal areas, otherwise mostly sunny.	75 to 90 mountains. 80 to 90 valleys. 90 to 100 upper deserts. 100 to 110 lower deserts.	10 to 30%.	Southwest to northwest 5 to 15 mph.

BACKFIRING OR BURNOUT OPERATIONS

Backfiring or burnout operations are often critical operations in the fire management job. If planned and executed correctly, they can speed control of a fire and greatly reduce suppression costs. Conversely, if done incorrectly, they can endanger personnel, extend control time and increase cost. Safety considerations must always be given first priority. No backfiring or burnout action, regardless of strategic importance or other critical factors, is worth risking one human life!

- Backfiring or burnout operations must not jeopardize the safety of personnel or equipment or compromise suppression actions on adjacent portions of the fireline.
- One qualified individual must be responsible for controlling and directing the firing operation.
- Before beginning backfiring or burnout operations, assure that:
 - Lookouts are posted.
 - Communications are established with both firing and holding teams.
 - Escape routes and safety zones are established, known to all resources, and will not be compromised by the firing operations.
- If it is necessary, and time allows, concentrations of fuel adjacent to and inside the control line should be removed.
- Fuel outside the control line may be removed; concentrations of fuel may be scattered, covered with foam or wet down, or treated by ground or aerial retardant applications.
- Critical points such as hooks in the fireline, saddles or canyon may require extra holding forces.
